

Increase Efficiencies. Reduce Waste.

PURELL SMARTLINK™ Service Alerts

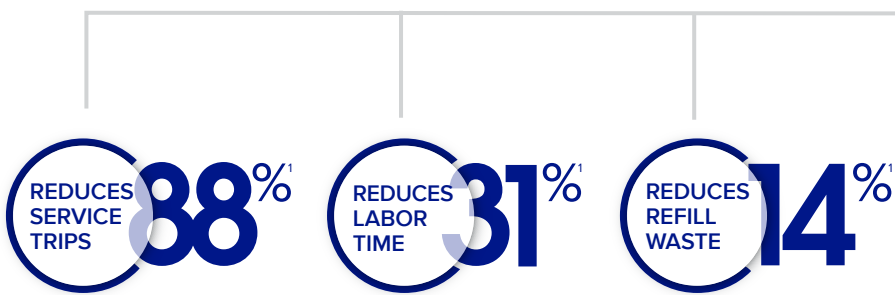

Never worry about empty dispensers, expired product, or dead batteries again. Proactive PURELL SMARTLINK Service Alerts keep you informed about the health of your dispenser fleet, ensuring availability and reducing complaints and work orders.

- Receive alerts for dispenser maintenance needs, network notifications, refill levels, and low batteries through our mobile app, email, or secure web-based portal
- Reduce product waste through accurate refill data that predicts product outages and helps enhance inventory management
- Use alongside a broader PURELL SMARTLINK hand hygiene monitoring program or as a standalone service
- Pull data from easy-to-use dashboards and reports to support staff and inform leadership

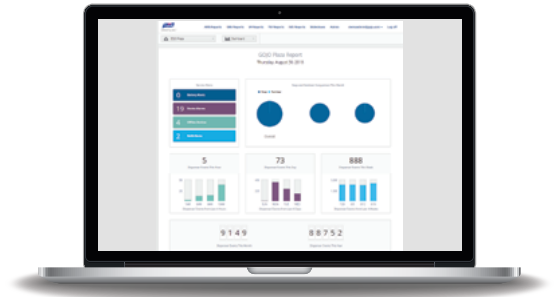

How It Works

The PURELL SMARTLINK™ secure software web portal allows users to customize alerts and includes data on dispenser usage, estimated refill replacement dates, and alarm status and history.

● PURELL SMARTLINK Service Alerts

Smart sensors work with service alerts and data reports to help increase efficiencies and manage product utilization.

Service Alert Notifications

Key Benefits

Environmental Services/ Maintenance Staff

receive predictive alerts that direct them to only those dispensers that need attention. This improves efficiency in maintaining dispensers so those resources can be focused on other service needs.

Medical Care Staff

will have access to fully functioning dispensers, assuring product is available for critical hand hygiene events to support infection prevention protocols.
